Re: Sanisafe 3 disinfectant wipes – Food contact use

Dear Sir/Madam

We confirm that the Allied's range of Sanisafe disinfectant wipes are approved for food contact use.

Our wipes hold certain European approvals for food contact applications. The wipes formula is non-toxic, non-tainting and transfers no taste to any food product placed directly onto the surface which has been wiped. Sanisafe 3 is also being supported under the Biocidal Products Regulations 528/2012 for use under Product Types 2, 3 and 4 – Public and Private area health, Veterinary and Food and Feed area disinfectants.

We hope the above information is of assistance and would be pleased to supply any additional information which may be required.

Kind regards

Andy Phippen

Director

Allied Hygiene
